

5100 Options and Accessories**5120-9620, -9621****Weather Proof Intercom Stations****FEATURES:**

- Environment Resistant Water Sealed Compression Driver
- Weatherproof Call Origination Switch
- Clear Voice and Signal Sound Transmission
- Die Cast Zinc Housing
- Flush or Surface Mounting Configurations
- High Power Intercom Operation

DESCRIPTION:

The Simplex 5120-9620 Intercom Station is ruggedly constructed to withstand moisture, corrosion, dust, vibration, and temperature extremes from -30 to 150 degrees Fahrenheit. The station includes a high intelligibility environment resistant compression driver and a weather proof push button for protected call-in signaling capability. The 45 ohm compression driver is constructed of die cast zinc and is water sealed for protection. An exponential sound projector provides clear audibility from the diver. The call switch is a momentary heavy duty push-button with a contact rating of 3 amps. The call button is protected by a weatherproof rubber boot to provide durable and safe operation in outdoor and high humidity environments. The entire assembly is 4-1/4" SQ x 3-1/4" D and is designed for semi-recessed installation.

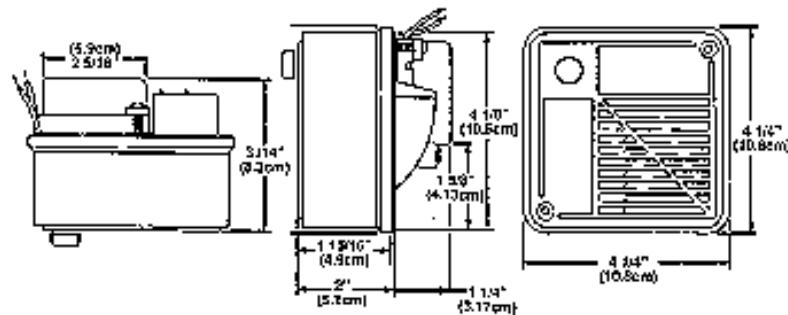

The Simplex 5120-9621 is identical to the -9620 except it is designed for flush mounting and is 6" SQ x 3-3/16" D. Both assemblies will accept a variety of mounting accessories and are finished in a beige epoxy.

SPECIFICATIONS:

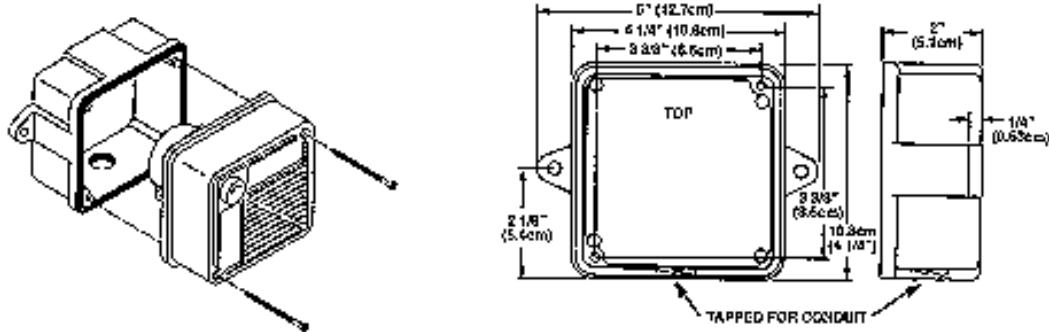

Speaker/Microphone	45 ohm water sealed compression driver
Speaker Output	99.8 dB (1 meter @ 1 watt)
Microphone Sensitivity.....	-26 dBm
Frequency Response	400-4000 Hz, +/-3 dB
Die Cast Faceplate.....	(4-1/4" SQ 5120-9620) (6" SQ 5120-9621)
Switch.....	SPST normally open 3 Amp
